CSE370
assignment #1
Ans to Q. no 1

1) DDL - The column was modified. Therefore, the structure or Schema was modified, hence this is DDL, as column name was changed - from "Student ID" to "SID".

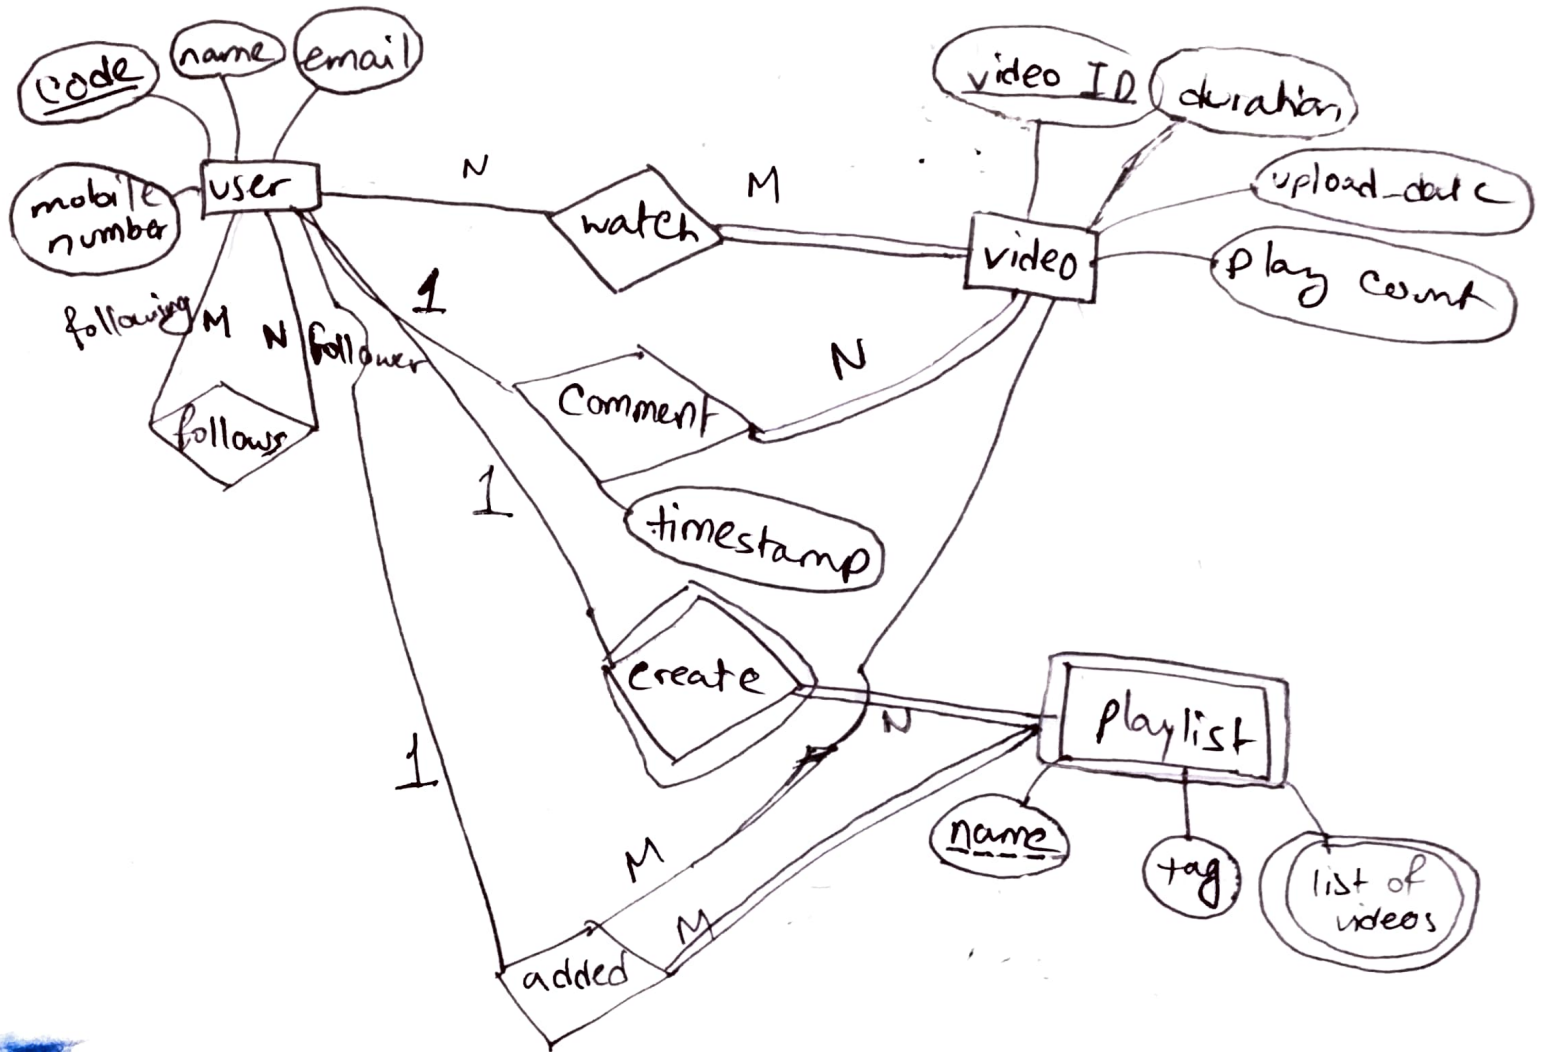

2) DML - The data value from row has been changed without changing the structure. Hence, this is DML, as row value of "class time" is changed.

Ans to Q. no 2

1) Physical data independence - changes in internal level schema where physical ~~memory~~ storage structure is changed without affected conceptual schema.

2) Logical data independence - This happens at conceptual schema, adding a new attribute added to database structure and where users cannot see the changes, external schema is intact.

Ans to Q. no 3

Assumptions

1. A user can create many playlists by adding multiple videos.
2. Many users can watch multiple videos, $N : M$.
